

Checklist for MRV

Objectives of the MRV approach are defined.

Effects of the NAMA are identified (cause-impact-chain).

Scope of the MRV approach is set (assessment boundaries) and MRV methodology defined.

Data needs and collection methods have been identified and agreed by relevant stakeholders.

Responsibilities for MRV have been assigned.

A monitoring plan has been developed.

Baseline emissions have been estimated and assumptions are agreed upon among relevant stakeholders.

GHG Impact of the NAMA has been calculated (ex-ante or ex-post).

Limitations of the GHG emission quantification are described (uncertainties).

Sustainability benefits and process indicators have been assessed.

Contents and procedures for reporting to the UNFCCC (and donors if applicable) are in place.

Supporting information to verify the GHG impact can be provided.
